---

## Professional Summary

Frontend-focused Software Engineer with 5+ years of experience at Microsoft, building React and TypeScript experiences for Skype and Teams MSA. Strong in product-minded UI engineering, accessibility, maintainable frontend architecture, rollout quality, and cross-functional collaboration. Experienced in distributed teams and in turning ambiguous product needs into reliable, user-centered frontend solutions.

---

## Technical Skills

Languages: TypeScript, JavaScript ESNext, HTML, CSS

Frontend: React, Next.js, browser APIs, responsive UI, accessibility, design systems, Tailwind CSS, styled-components

State & Data: typed UI state, API integration, React Query, Supabase, feature flags, staged rollout thinking

Testing & Quality: Vitest, React Testing Library, unit testing, integration testing, code reviews, documentation, regression prevention

Tools: Git, GitHub, VS Code, Copilot, ChatGPT, Claude, CI/CD workflows, Vite, Webpack

---

## Professional Experience

### Microsoft - Software Engineer II

Jan 2021 - Present | Prague, Czech Republic / Hybrid | Skype, Teams MSA

- Build and improve user-facing features in large-scale communication products using React, TypeScript, modern JavaScript, and browser technologies.
- Deliver frontend changes in mature production codebases with focus on accessibility, user experience quality, maintainability, and safe release practices.
- Contributed to the upgrade of a sensitive user-reporting flow, focusing on frontend implementation, accessibility, cross-team coordination, and user experience quality while respecting confidentiality boundaries.
- Improved codebase health by removing obsolete code paths, cleaning experiment and feature-flag naming, and documenting cleanup patterns for other engineers.
- Supported safer product rollouts through feature flags, staged delivery mindset, production readiness, and regression prevention.
- Collaborate with product, design, backend, privacy, security, and accessibility stakeholders in distributed team environments.
- Acted as Scrum Master from 2021 to 2024, facilitating agile practices, improving communication, and helping remove delivery blockers.

### Neuro Device Group - Technical Specialist | Product & Interactive Systems

Mar 2015 - Oct 2019 | Warsaw, Poland

- Worked at the intersection of product demonstrations, research systems, and user support for eye-tracking, EEG, ECG/EKG, PPG, VR, and psychophysiology technologies.
- Co-prepared visual experiments and multi-device research setups, including museum, consumer lab, education, and clinical-trial contexts.
- Led and supported dozens of approachable workshops and demos for students, researchers, marketers, and children, translating complex technical systems into clear user-facing experiences.

## Independent Projects

### VoicePin - short voice messages with automatic transcription

Public GitHub repo, in progress | React, TypeScript, Next.js, Tailwind CSS, speech-to-text API | [github.com/ekaramus/voicepin](https://github.com/ekaramus/voicepin)

- Building a mobile-first app for short voice messages with automatic transcription, focused on audio recording UX and lightweight communication flows.
- Focus areas: draft/send states, typed UI state, API integration, accessible mobile interface, and clear product scoping for an MVP.

### VibeCheck - daily productivity and energy tracker

Public GitHub repo, in progress | React, TypeScript, Next.js, Supabase, Vitest, Tailwind CSS | [github.com/ekaramus/vibecheck](https://github.com/ekaramus/vibecheck)

- Building a minimal daily check-in app with morning energy, optional goals, evening reflection, and realistic partial-completion states.
  - Focus areas: typed domain modeling, status derivation, Supabase persistence, tested business logic, and calm, accessible productivity UX.
- 

## Education

### Warsaw University of Technology - Master of Engineering, Biomedical Engineering

Graduated 2015 | Warsaw, Poland

---

## Selected Fit for Software Engineer (Frontend)

- 5+ years of React and TypeScript experience in large-scale Microsoft products.
  - Product-minded frontend engineer who connects UI implementation with user experience, accessibility, privacy-conscious delivery, and maintainability.
  - Comfortable collaborating with product designers, backend engineers, and cross-functional stakeholders from design through release.
  - Strong practical ownership: feature work, codebase cleanup, documentation, rollout thinking, and team-process contribution.
  - Active independent projects demonstrate current hands-on practice with Next.js, API integration, mobile-first UI, Supabase, and frontend testing.
- 

## Additional Notes

Open to frontend product engineering roles with strong ownership, high-quality UI, and close design collaboration. Public project repositories are available on GitHub and will be linked from the portfolio website as they mature.
